

Landing Page

- **1.** The search should include the following fields:
 - **a.** The top part of the search box should have 3 selection pads(see the psd- should function like radio buttons) and the selected pad should have text in red and a underline -
 - **Return** (by default selected)

• *Single* – When this is selected, the 'Return' (date) field should be hidden.

• *Multi City* – When this selection pad is selected, the 'Return' (date) field should be hidden and the user should be allowed to add more rows with the same details. There should be an option to remove each row (a '-' sign at the left of each row) and an option to add new rows (left bottom '+ Add More' sign). It should look something like the screenshot below. But also add the other mentioned points-

b. Check boxes for Flights, Hotels, Cars.

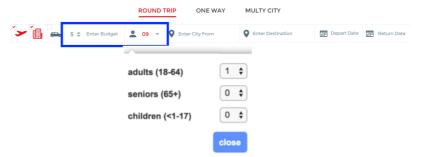

- When hovered on the *Flight* symbol, the text 'Flight' should show up.
- When hovered on the *Accommodation* symbol, the text 'Accommodation' should show up.
- When hovered on the *Car* symbol, the text 'Cars' should show up.
- c. Currency, Budget and Number of Travellers

- 'Currency' should be a drop down value.
- 'Enter Budget' is a numeric field.
- When clicked on the down arrow in the traveller box, user should be presented with further options to enter age details-

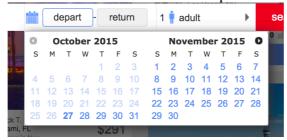

• There should be one more drop down called '*Rooms*' (after Number of *Travellers*). This should default to 1.

d. 'City From' & 'Destination'

e. Date Fields with Calendars- 'Depart' & 'Return'

The above mentioned 4 groups (b, c, d, e) should always show up together if the screen size is decreased. This means that the input fields mentioned for group 'a' should never split doesn't matter how small the screen size is. If the screen size is large enough, then all should show up in one single line. This is extremely important for responsive designing.

- 2. The main sections in the Landing Page are (see psd)
 - a. Header
 - **b.** Search Bar
 - c. Banner
 - **d.** About Lazy Gypsy- 4 images (or icons) that should individually have hovering effect (in red when mouse cursor is pointed here).
 - **e.** News Section- Should be an option to 'View More' that will expand the news feed.
 - f. Footer
- → Also, note that there should be hazy background sketches in the main body (as shows up in the psd for landing page).
- ightharpoonup The boxed border of the search bar is not required. The vertical lines separating each cells should remain.
- → The flights/accommodation/cars icons should be changed in the new design. Use the icons and functionality (red upon click on checkbox/icon) as there in the old design.
- → Anything that shows up in blue in above screenshots should be in colour red. The theme of the website is black & white sketches with some red colour.
